You must create a website to host your project deliverables and to showcase your effort to the rest of the world!

An initial version is due 9/29/2016 (please email to instructor the URL for your website, and cc: all of your team mates). This initial submission is just a draft. You are expected to update the web page at the end of the semester to contain all deliverables, presentations, video, and source code. The final updated version is due 12/1/2016.

The final grade for this component of the project will be determined at the end of the semester. This will count as 6% of your overall grade.

In the past, students often used Google Sites or a site from github to host their project page. This is preferred over a student UA web page, in order to preserve the project archive for the future.

Expected contents of web site

1. The main page of the website should give a concise definition of the project goals. At the end of the semester, it may be appropriate to place the video either at the bottom of this description, or on a separate page.

2. A link to a subpage of project deliverables should be provided. This page should contain all of the presentations, delivered documents, and a link to the final .apk file for your app.

3. A link to a separate page should be provided that provides a bio of all the team members, to whatever detail the team feels comfortable providing (photo, bio, contact, etc).

Samples from the Past: The following are samples from past CS 495 projects. These are not intended to be perfect examples, but just suggestions for you to see what has been prepared in the past:
